Hosted Solutions

Hosted Exchange Server 2007

Hosted Share Point Services 3.0

Exchange Server is software that runs on servers, enabling you to send & receive electronic mail & other forms of interactive communication through computer networks. Designed to interoperate with a software client application such as Microsoft Outlook, it interoperates with Outlook Express and other email client applications.

SharePoint Services 3.0 lets you compare notes, share schedules & work together on any type of file - anywhere, anytime & on any web browser. The service also makes it easy to launch & maintain intranets, web sites, bulletin boards & picture libraries, as well as to improve project management with shared calendars & issue tracking capabilities.

Key Benefits:

Exchange Server
- Full private-labeling capability
- Web-based service
- Web-based control panel
- Free outlook 2007/ Entourage 2008

SharePoint Services 3.0
- Includes IT portals, team work-spaces, email, presence awareness & web-based conferencing
- Enables you to locate distributed information quickly & connect more productively with others
- Supports individual & team productivity through information sharing & document collaboration
