Managed Security Solutions

E-mail Defense

Web Defense

Message Archiving

E-mail Defense: Comprehensive protection against spam, worms, viruses, e-mail attacks and more. Works at the network perimeter to identify, quarantine, block and strip suspect e-mail messages before they can enter the messaging infrastructure. Flexible, easy to use and requires no upfront hardware or software implementation.

Web Defense: Protects customers by blocking web-based threats like spyware, key loggers, viruses and phishing attacks at the network perimeter. Allows category and content- based control over unauthorized Web surfing.

Message Archiving: Allows businesses to store, monitor and retrieve all inbound, outbound and internal e-mails for compliance or general storage/retrieval purposes.

Key Benefits

- Deploy a new service immediately, with no additional resources or infrastructure required
- Effective multilayered defense against a wide range of email threats
- Protect against spyware, viruses, phishing, and uncontrolled web access
- Offers data protection for employees and management, but supports industry retention and compliance regulations
