

Software Inventory/ Usage Management

eastbay
I. T. CONSULTING INC.

Software Inventory & Usage Management service helps eliminate the costly and often inaccurate process of manually tracking software licenses, making it easy to compare installed applications to purchased licenses throughout your organization.

Software Inventory/Usage Management

Software Inventory/ Usage Management

With Software Inventory/Usage Management you can collect information on every installed application enterprise-wide with a fully automated cross platform discovery engine. It allows you to identify the parent applications for up to millions of executables to track software by publisher, category, size, version, language, file date and more.

Track actual software usage to uncover unused licenses or improve negotiating leverage with vendors. Also, centrally track complex licensing arrangements with multiple vendors in a single system.

You will be able to compare actual installations and usage to license agreements, to help control costs, ensure compliance and produce vendor audit reports.

With on-demand reports for individual users, departments, or across an entire organization, you can visually see your company's progress and implement changes as are necessary, allowing for more productivity.

Key Benefits

- Automated software Discovery
- Distill executables into licensed parent Applications
- Track usage to help reduce software costs
- License tracking
- License compliance Assurance
- Actionable inventory reports
